

Contents

Introduction	11
1. Tensions in the Test Evaluation Literature	21
1.1 Ontological Assumptions Behind the Claim That a Test Can Only Be Useful if It Accurately Detects a Disease	24
1.2 The Assumption That a Test Can Only Be Useful if It Accurately Detects a Disease Is Counterintuitive	31
1.3 Ontological Assumptions Behind Fixed Sensitivity and Specificity	36
1.4 The Assumption That Sensitivity and Specificity Are Fixed Is Counterintuitive	48
1.5 Patient Homogeneity and Meaningful Test Evaluations	53
1.6 Conclusion	56
2. The Characteristics of Disease Are Often Heterogeneous and Non-Specific	58
2.1 Clinical Population	59
2.2 Clinical Pathway	62
2.3 Choice of Reference Standard	69
2.4 Purpose of Testing	70
2.5 Positivity Timeline	71
2.6 Therapeutic and Prognostic Target Conditions	73
2.7 Conclusion	83
3. Homogeneity, Heterogeneity, and Specific Disease Entities	
Sensitivity and Specificity in the Long Twentieth Century	84
3.1 Historical Background to the Twentieth Century	87
3.2 Sensitivity and Specificity in the First Half of the Twentieth Century	103
3.2.1 Theoretical Concerns about the Wassermann Reaction	108
3.2.2 Practical Concerns about the Wassermann Reaction	120
3.2.3 Trials of Strength for Different Tests for Syphilis	134

3.2.4	The Wassermann Test Falls from Grace	140
3.2.5	Wider Influence of the Wassermann Test.....	141
3.3	Test Evaluation and Statistical Methods After World War II	150
3.4	Test Evaluation, Bayes' Theorem and Computer-Aided Diagnostics	168
3.5	From 'Normal Ranges' to 'Discrimination Values'	177
3.6	Variation in Sensitivity and Specificity Rediscovered: Genuine Effect or Artifact?.....	186
3.6.1	Reference Standard Misclassification	188
3.6.2	The ROC Curve: One or Many?.....	203
3.7	Grappling with Patient Heterogeneity.....	219
3.8	Conclusion	237
4.	Diagnostic Accuracy, Severity, Obviousness and Utility	
	Tensions in Traditional Test Evaluation Frameworks	243
4.1	Variation in Disease Severity as a Source of Patient Heterogeneity.....	245
4.2	Variation in Obviousness as a Source of Patient Heterogeneity.....	251
4.3	Diagnostic Accuracy and Clinical Utility	257
4.4	Myocardial Infarction: Tests Do Not Need to Accurately Detect a Disease to Be Useful	262
4.5	Conclusion	277
5.	Some Problems from Current Practice	280
5.1	Testing for Tuberculosis	280
5.2	Public Health England and Antigenic Tests for SARS-CoV-2.....	283
5.3	The Cochrane Collaboration Reviews of Tests for COVID-19 Disease	290
	Conclusion	299
